

# A Additional Tables

## A.1 Different Samples

1. Table A1 reports the result obtained on the pre-crisis sample that ends in May of 2007.
2. Table A2 reports the results obtained on the longer sample that ends in May of 2018. This sample includes the zero-lower-bound episode from December of 2008 to 2015.
3. Table A3 reports the results obtained on the longer sample that ends in May of 2018. This sample includes the zero-lower-bound episode from December of 2008 to 2015. Panel A considers meeting days on which target rate was not changed. Panel B considers days on which target rate was changed.

Table A1: Impulse Response of U.S. Treasuries on FOMC Meeting Days Pre-Crisis

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 143 regularly scheduled FOMC meetings between 5-June-1989 and 07-May-2007. HAC standard errors computed with one lag for  $k \leq 50$ , 2 lags for  $51 < k < 75$  and 3 lags for  $k \geq 75$

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 224 regularly scheduled FOMC meetings between 5-June-1989 and 21-March-2018. The sample contains 64 Fed Funds Target Changes on regularly scheduled FOMC meetings between 5-June-1989 and 21-March-2018. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \geq k < 75$  and 4 for  $k \geq 75$ .

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 224 regularly scheduled FOMC meetings between 5-June-1989 and 21-March-2018. The sample contains 64 Fed Funds Target Changes on regularly scheduled FOMC meetings between 5-June-1989 and 12-March-2018. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \leq k < 75$  and 4 for  $k \geq 75$ .

## A.2 Evidence from Other Classes

1. Table A4 reports the impulse response for swap rates.
2. Table A5 reports the impulse response for corporate bonds.
3. Table A6 reports the impulse response for TIPS.

OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 96 regularly scheduled FOMC meetings between 5-Feb-1997 and 29-Oct-2008. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \geq k < 75$  and 4 for  $k \geq 75$ .

### A.3 Mutual Fund Returns and Flows: Robustness

1. Table A7 reports returns for government bond, corporate bond, and mortgage mutual funds.
2. Table A8 reports the dynamic response of fund flows to monetary surprises after target changes, controlling for news about path. Table considers only government bond funds.
3. Table A9 reports the dynamic response of fund flows to monetary surprises after target changes, controlling for news about path. Table considers all fixed income funds.
4. Table A10 reports the dynamic response of fund flows to rate changes and monetary surprises.

Impulse Response of U.S. mutual fund flows to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  months. Aggregate Fund flows are divided by aggregate TNA. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 157 regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008. The sample contains 59 Fed Funds Target Changes on regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008.

Impulse Response of U.S. mutual fund flows to 100 basis points (Kuttner) surprise and to the actual change in Federal Funds Rate after  $k$  months. Aggregate Fund flows are divided by aggregate TNA. OLS (HC) standard errors in parentheses (brackets) reported on row (2/3) and (5/6) of each panel. The unadjusted  $R^2$  is reported in row (7). The sample contains 59 Fed Funds Target Changes on regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008.

## A.4 Robustness

### Serial Correlation

1. Table A11 reports the response of Treasury yields when controlling for surprises on FOMC meeting days that occur in the window.
2. Table A12 reports the response of Treasury yields when controlling for surprises on FOMC meeting days that occur in the window and controlling for news about the path.
3. Table A13 reports the response of Treasury yields when controlling for the release of the Fed minutes.
4. Table A14 reports the response of Treasury yields when controlling for surprises on FOMC meeting days that occur in the window and the release of the Fed minutes.

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 157 regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008. We report results for  $k = 50$  ( $k = 100$ ), keeping those observations for which we have another (two) FOMC meeting(s) or inter-meeting changes within 50 (100) days. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \leq k < 75$  and 4 for  $k \geq 75$ .

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 157 regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008. We report results for  $k = 50$  ( $k = 100$ ), keeping those observations for which we have another (two) FOMC meeting(s) or inter-meeting changes within 50 (100) days. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \geq k < 75$  and 4 for  $k \geq 75$ .

## **Survey Expectations**

1. Table A15 reports the response of survey expectations to monetary surprises.
2. Table A16 reports the response of Treasury yields when controlling for changes in inflation expectations around the FOMC meetings.
3. Table A17 reports the response of Treasury yields when controlling for changes in inflation expectations around the FOMC meetings.
4. Table A18 reports the response of Treasury yields when controlling for changes in inflation expectations around the FOMC meetings.

Response of Change in Forecasts to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  months. OLS (HC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. Monthly Data. The unadjusted  $R^2$  is reported in row (4). Full sample contains 98 regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008 without target changes. The sample contains 59 Fed Funds Target Changes on regularly scheduled FOMC meetings between 5-June-1989 and 29-Oct-2008.

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. OLS (HAC) standard errors in parentheses (brackets) reported on row (2) and (3) of each panel. The unadjusted  $R^2$  is reported in row (4). Full sample contains 98 regularly scheduled FOMC meetings between 1-Feb-1994 and 29-Oct-2008 without target changes. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \leq k < 75$  and 4 for  $k \geq 75$ .

## B Additional Figures

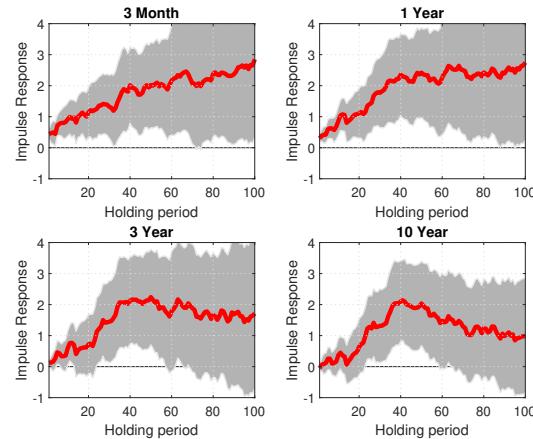

1. Figure A1 plots the impulse response of Treasury yields to monetary surprises controlling for news about the path.
2. Figure A2 plots the impulse response of Treasury yields to monetary surprises controlling for news about the path.

Figure A1: Impulse Response of U.S. Treasuries: Controlling for Path

*Panel A: No Target Change*

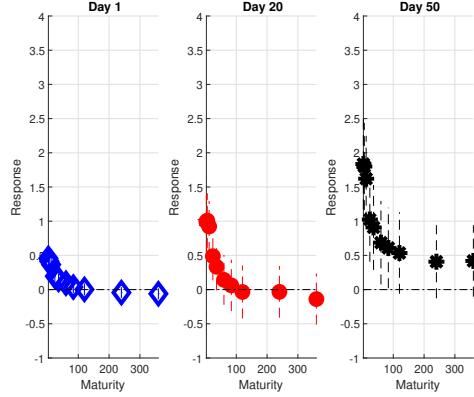

*Panel B: Target Change*

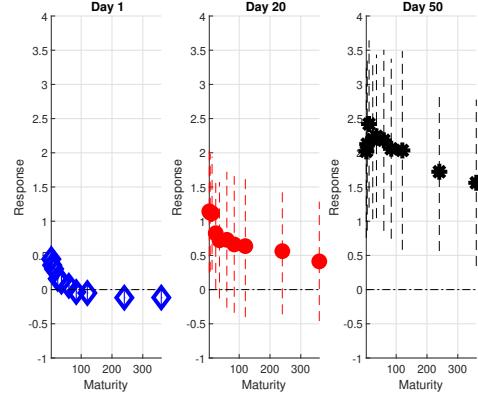

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. Sample consists of all 161 FOMC meetings between 10/1/1982-10/29/2008. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \geq k < 75$  and 4 for  $k \geq 75$ .

Figure A2: Impulse Response of U.S. Treasuries: FOMC Meetings

*Panel A: No Target Change*

*Panel B: Target Change*

Impulse Response of U.S. Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in Federal Funds Rate after  $k$  days. Sample consists of all 161 FOMC meetings between 10/1/1982-10/29/2008. HAC (Newey-West, Bartlett kernel) standard errors computed with bandwidth of 2 for  $k < 50$ , 3 for  $50 \leq k < 75$  and 4 for  $k \geq 75$ .

## C International Evidence

1. Figure A3 plots the response of Australian Treasuries.
2. Figure A4 plots the response of New Zealand Treasuries.
3. Figure A5 plots the response of Swiss Treasuries.
4. Figure A6 plots the response of German Treasuries.
5. Figure A7 plots the response of UK Treasuries.
6. Figure A8 plots the response of Canadian Treasuries.

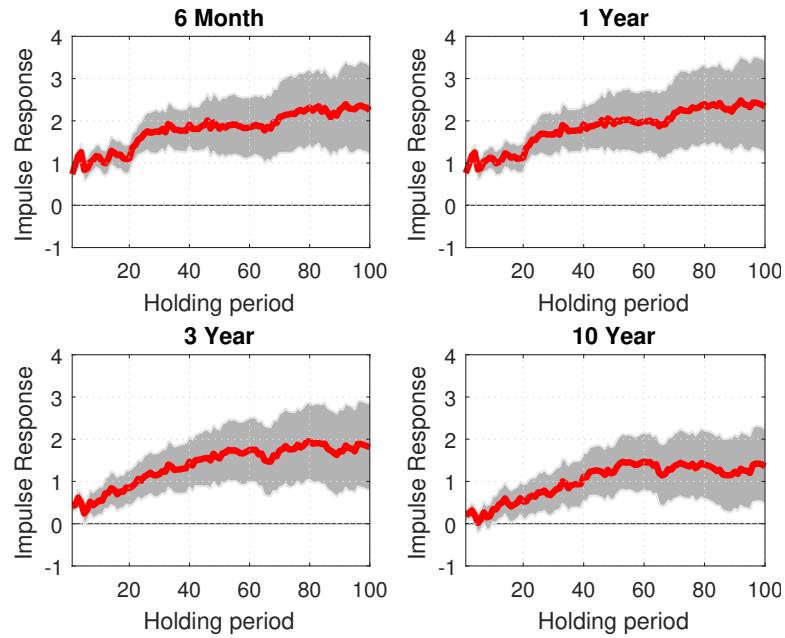

Figure A3: Impulse Response of Australian Treasuries with Constant Maturity to 100 basis points surprise after  $k$  days.

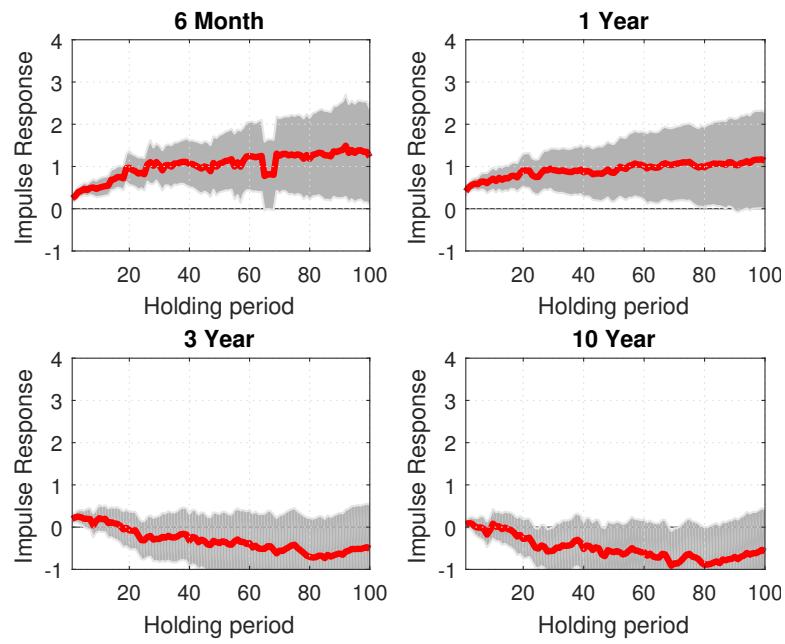

Figure A4: Impulse Response of NZ Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise after  $k$  days.

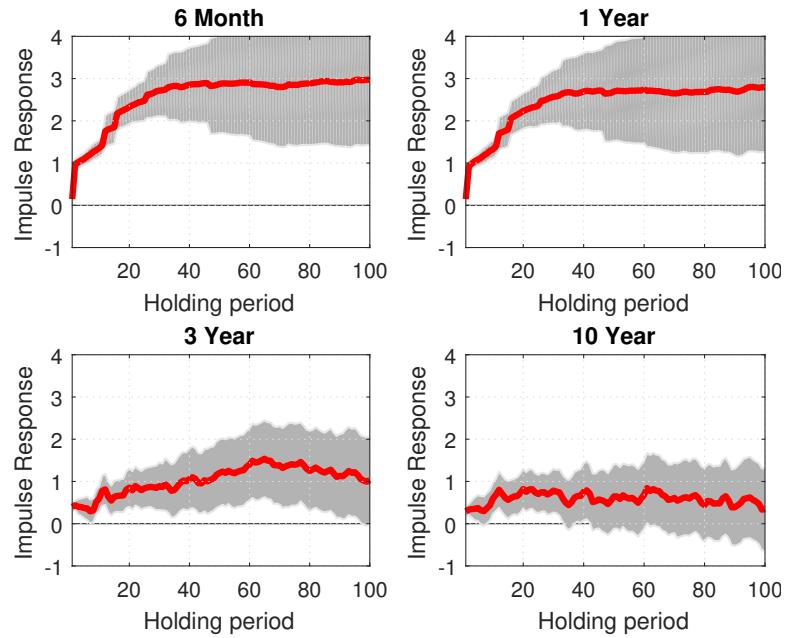

Figure A5: Impulse Response of Swiss Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in after  $k$  days.

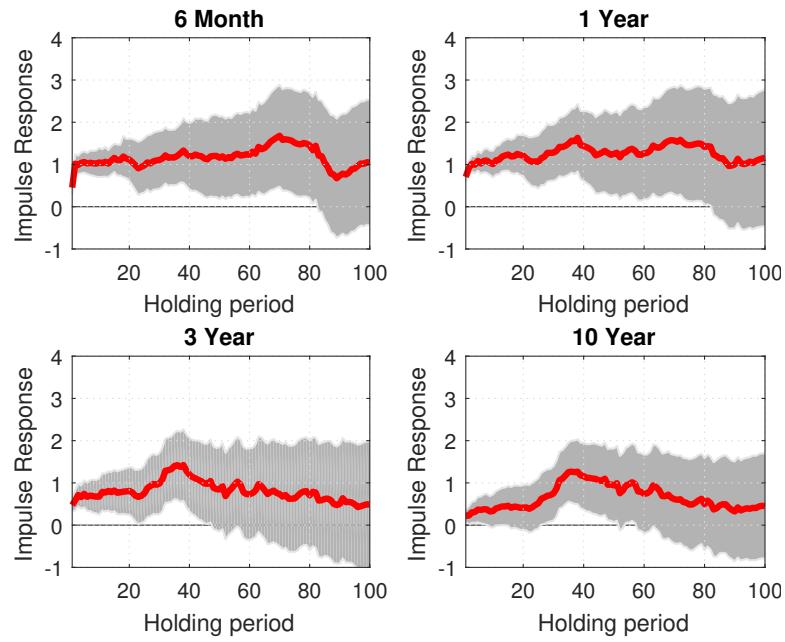

Figure A6: Impulse Response of German Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in after  $k$  days.

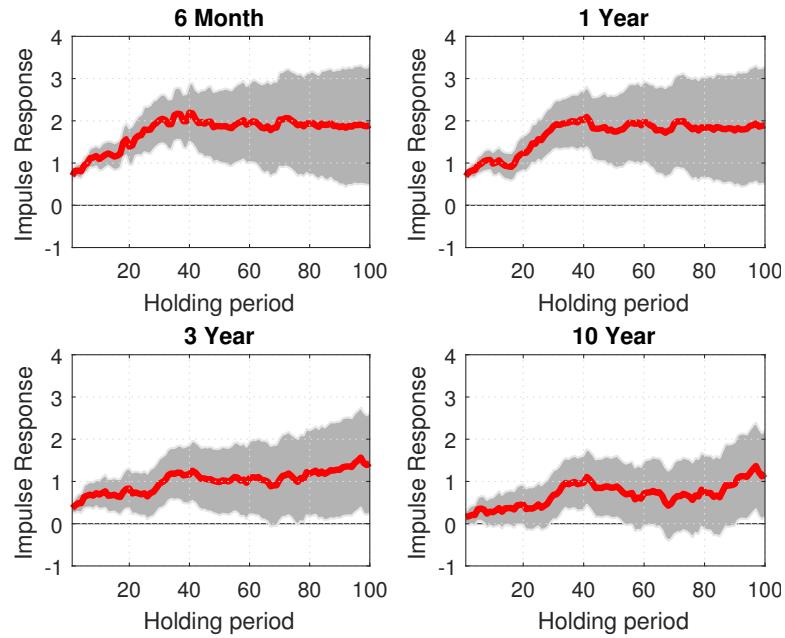

Figure A7: Impulse Response of UK Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in after  $k$  days.

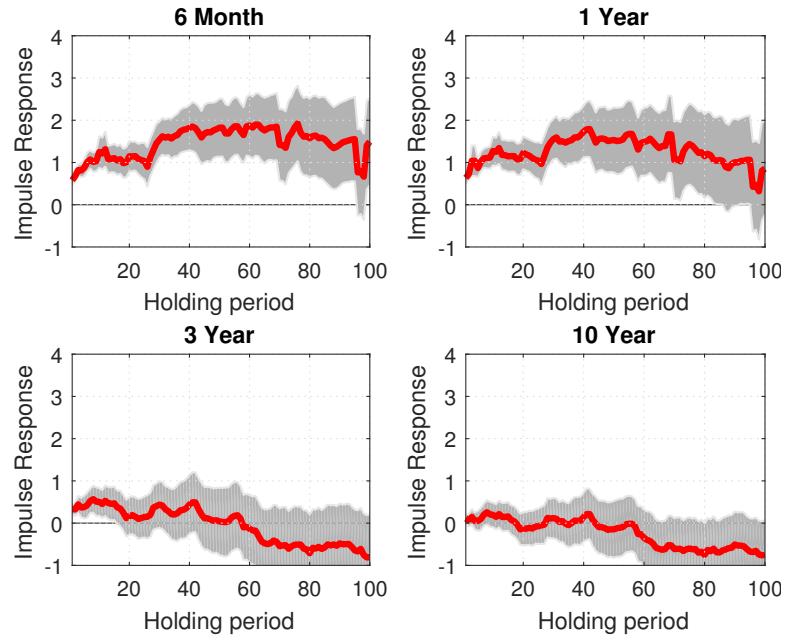

Figure A8: Impulse Response of CN Treasuries with Constant Maturity to 100 basis points (Kuttner) surprise in after  $k$  days.
